Dear all,

Project Review 2 is on Friday, 9 October.

WHAT REVIEW 2 IS

Review 2 carries 5 marks:

- Working AI core, running on a real test case 3 marks
- Understanding of the algorithm 2 marks

This review is about one thing: your algorithm must actually run.

Not the interface. Not the data loading. Not a slide deck describing what you plan to build. The algorithm itself — your A*, your minimax, your chaining engine, your sampler, your local search — must execute end to end on at least one real input and produce output I can see.

WHAT TO BRING

1. A laptop with your code running. Set it up before you come in, not during your slot.
2. At least one working test case, ready to run.
3. Your code open, so you can point to the part that does the reasoning.

I may ask you to run a different input from the one you prepared. Partial output on a case that fails is more useful to me than a polished demo of a single rehearsed example — bring what you have.

WHAT DOES NOT EARN MARKS HERE

- User interface, styling or visual design
- File reading, data cleaning or setup code
- Slides or documentation about what you intend to build
- A library call standing in for the algorithm you were supposed to write

If your AI core is not written yet, come anyway and show me what does run. Scope can still be reduced at this stage.

THE 2 MARKS FOR UNDERSTANDING

I will ask each team to explain how the algorithm works — its mechanism, its assumptions, and where it fails. Any member may be asked, not just the one who wrote it.

Remember that the Review 3 viva is individually marked. If only one person in your team understands the core, that will become a problem for everyone else. Use the next few weeks accordingly.

TEAMS WITH ACTIONS FROM REVIEW 1

Several teams were given a specific action in their Review 1 feedback — scope to be reduced, a heuristic or cost function to be defined, a rule base to be bounded, team membership to be confirmed, or in two cases a change of approach. Please check your feedback.

If you were given a required action, show me at Review 2 that it has been addressed.

If your Review 1 document link was not accessible to me, reshare it with view access before Friday. If you are stuck on something specific, come and ask before Friday rather than after.

Regards,

Nancy Lydia R
Assistant Professor Junior, SCOPE
BCSE306L – Artificial Intelligence
